

## McCAFFERTY BRINSON *consulting*

### *About Us*

**McCafferty Brinson Consulting, LLC** (MBC) is an engineering consulting firm founded in Broward County, Florida, in 2006. MBC offers environmental consulting, engineering design, and construction administration services related to potable water, reclaimed water, and wastewater treatment systems, pumping and transmission systems, and utility infrastructure, as well as permitting and regulatory compliance consulting. MBC serves our clients in Miami-Dade, Broward, and Palm Beach counties from our office locations in Miami and Fort Lauderdale.

### *Our Team*

MBC was established in February 2006 by two Florida Professional Engineers, focusing on potable water, reclaimed water, and wastewater treatment systems, pumping and transmission systems, and utility infrastructure. The principals, Ms. Audra McCafferty and Mr. Frank Brinson, have over 50 years of combined experience in environmental consulting and engineering design, serving both the public and private sectors.

MBC's suite of services is supported by a highly qualified team of project engineers, technical professionals, CAD designers, and administrative staff to offer the responsive, personal attention that we strive to provide to our clients.

MBC is certified as a Small Business Enterprise (SBE) and County Business Enterprise (CBE) in Broward County. MBC is also a registered Small Business Enterprise with the South Florida Water Management District. The State of Florida has certified MBC as a Minority Business Enterprise.

### *Philosophy:*

Our mission is to provide quality consulting services based on a foundation of honesty, integrity, and attention to detail. To deliver the right engineering solutions for our clients while being attentive and responsive to our clients' needs.

### *Our Advantage*

Although our capabilities and expertise are built on a foundation of national and international experience with some of the most respected large engineering consulting firms in the industry, MBC is a small, local firm. We strive to offer our clients the same level of technical expertise and up-to-date technology expected from the leading international consulting forms, but with "local firm" responsiveness, personal service, and attention to detail that is often lacking from large firms. MBC takes pride in developing personal relationships with our clients, while maintaining a knowledge base and level of professionalism to compete with the leading national and international engineering consulting firms.
